/issue_type="from acute myelogenous leukemia"
/lab_host="DBIOB (TI phage-resistant)"
/note="Organ: bone marrow; Vector: pDNR-LIB (Clontech);
Site_1: Site] (ggocgcctcggcc); Site_2: SfII (ggocattatggcc); Site_1: SitI (ggocattatggcc); Site_2: SfII (ggocattatggcc); Double-stranded cDNA was prepared from cell line RNA.
5, and 3' adaptors were used in cloning as follows: 5' adaptor sequence: 5'-CAGGCCANTATGGCC3' and 3' adaptor sequence: 5'-ATTCTAGAGGCGGAGGCGGACATG-dT(30)BN-3'
(where B = A, C, or G and N = A, C, G, or T). Average insert size 1.65 kb (range 0.9-4.0 kb). 14/15 colonies contained inserts by PCR. This library was enriched for full-length clones and was constructed by Clontech
Laboratories (Palo Alto, CA)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Eukaryota, Metazoa, Chordata, Craniata, Vertebrata; Euteleostomi, Mammalia; Eutheria, Primates, Catarrhini; Hominidae, Homo.

                                                                                                                                                                                                                                                                                                                                                          The invention relates to sequence determination oligonucleotides for abtencing polymorphic sites in a 5' flanking region of cytochrome P450 2D6 (CYP2D6) gene. CYP2D6 enzymes are involved in the metabolism of many different xenobiotics. Human CYP2D6 gene is located on chromosome 22. The oligonucleotides may be used as in situ hybridisation probes, in ligase-based sequenced determination, as components of diagnostic assays, as probes in sequence determination methods based on mismatches, as hybridisation-based diagnostic assays, and as components of diagnostic microarray. CYP2D6 is useful to predict variations in an individual's ability to metabolise certain drugs. The present sequence is human CYP2D6 gene 5' flanking region containing polymorphic sites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; cytochrome P450; subfamily IID polypeptide 6; CYP2D6; enzyme; chromosome 22q13.1; drug metabolism; detoxification; mono-oxygenase; antiarrhythmic; arrhythmia; adrenoreceptor antagonist; hypertension; tricyclic antidepressant; procainamide; drug induced lupus syndrome; environmentally linked disease; Parkinsons's disease; haplotyping; haplotype; genetic variant; single nucleotide polymorphism; SNP; drug screening; drug discovery; gene; ds.

The invention relates to sequence determination oligonucleotides for detecting polymorphic sites in a 5' flanking region of cytochrome P450 205 (CYP2D6) gene. CYP2D6 enzymes are involved in the metabolism of many different xenobiotics. Human CYP2D6 gene is located on chromosome 22. The oligonucleotides may be used as in situ hybridisation probes, in ligase-based sequenced determination, as components of diagnostic assays, as probes in sequence determination methods based on mismatches, as hybridisation-based diagnostic assays, and as components of diagnostic microarray. CYP2D6 is useful to predict variations in an individual's ability to metabolise certain drugs. The present sequence is human
                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                    ö

  The present sequence is that of the promoter region of the human cytochrome P450 CYP2D6 gene. The promoter region was amplified CYPCDFORD Gene. The promoter region was amplified by CYPCDFORD Gene. The promoter region was amplified by PCR from leucocyte DNA of over 50 individuals, and sequenced. B Previously unknown single nucleotide polymorphisms (SNP) were identified. These were at: base 36 (base -1584 according to the CC G occurring at an estimated frequency of approximately 20% in the Whole population, and resulting in increased enzyme activity.

CC G, occurring at an estimated frequency of approximately 20% in the control position 386 (-1235), A to G, approximately 20% in the control position 386 (-1235), A to G, approximately 50% frequency, neutral function; position 620 (-1000), G to A, approximately 30% frequency, unknown function; position 940 (-680), C G to A, rare, unknown function; and 1298 (-322), T to C, rare, unknown function The C to G mutation at -1584 bp is strongly associated with lower metabolic ratios, and a molecular variant polymored and a thin increased acceptor-antagonist, tricyclic reduced or enhanced capacity for clearance of CYP2D6 substrates of antidepressant, selective scrotonin reuptake inhibitor, neuroleptic, opiate, cytostatic or amphetamine), or succeptibility to such a contact or enhanced capacity for clearance of a mutation at the CYP2D6 promoter. The strong association of the common C to G mutation at correlation between genotype and phenotype in the CYP2D6 polymorphism. Testing for the mutation will allow the identification of intermediate metabolism cannot the invival or any of me metabolism cannotype in the common contact on in viva drug metabolism cannotype in the cyp2d6 polymorphism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ;
                                                                                                                                                                                                                                                                                                           polynucleotide capable of hybridizing to CYP2D6 promoter useful for the optimization of drug therapies using substrates of cytochrome P-450
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         in vivo drug metabolism capacity, thus providing a very potent
of for improving the therapy of diseases with drugs that are

Note: The present sequence is not shown in the specification but is derived from the CYP2D6 promoter sequence given in the Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                          antagonist, tricyclic antidepressant, selective serotonin reuptake inhibitor, neuroleptic, opiate, cytostatic or amphetamine), or susceptibility to such a disorder, by determining the presence of a mutation in the CYP2D6 promoter. The novel variant forms of the CYP2D6 gene provided by the invention provide the potential for the development of a pharmacodynamic profile of drugs for a given patient. The finding and characterization of variations in the
                                                                  The present sequence is that of the promoter region of the human cytochrome P450 CYP2D6 gene, which includes G at position 36 base -1584 according to the Human Cytochrome P450 Allele Nomenclature). The presence of C at position -1584 bp is a marker for low enzyme activity, whereas there is strong association of at position -1584 bp with increased enzyme activity. The C to G single nucleotide polymorphism occurs in approximately 20% of the population. The invention provides a method of diagnosing a disorder related to reduced or enhanced capacity for clearance of CYP2D6 substrates (antiarrhythmic, beta-adrenergic receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   .;

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acid comprising fragment of chemically modified gene, useful for diagnosis and treatment of diseases associated with abnormal cytosine methylation

The invention relates to a nucleic acid comprising a sequence at least 18 bases in length of a segment of the chemically pretreated DNA of genes associated with pharmacogenomics according to one of the compares associated with pharmacogenomics according to one of the sequences of the genes ALDH6 (NM_000693), CYP11A (NM_000491), CYP1B1 (NM_000497), CYP343 (NM_000776 and NM_017460), DPYD (NM_000110), EPHX2 (NM_001979), CALN (NM_000776 and NM_017460), DPYD (NM_001980), CM_NM_001990, NM_019900, NM_019902, NM_019902, NM_01980, NM_01980), NM_019900, NM_019901, NM_019902, NM_01986, NM_01980, NM_019900, NM_019901, NM_019902, NM_01980, NM_01980, NM_01980, NM_01980, NM_01980, NM_01980, NM_01980, NM_019900, NM_019900, NM_01980, NM_01980,
      cytostatic; ALDH6; CYP11A; CYP11B1; CYP3A3; DPYD; EPHX2; OCLN; TXNRD1; UGT8; MRP; pharmacogenomics; SNP; single nucleotide polymorphism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acid, oligonucleotides and peptide nucleic acid-oligomers, useful for detecting cytosine methylation state of genes associated with pharmacogenomics and for therapy of diseases e.g. cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 5884 BP; 1730 A; 92 C; 1381 G; 2681 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human immune system associated gene SEQ ID NO: 530.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Six hundred and twenty three polynucleotides derived from a variety of human tissue sources which encode secreted proteins, useful for treating immune deficiencies and disorders such as autoimmune disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to the isolation of novel cDNA sequences which encode human secreted proteins. The CDNA sequences have been derived from a variety of human tissues. The invention also provides a method for producing proteins from these polynucleotide sequences. The proteins are useful for identifying compounds that modulate their activity and production. The sequences of the invention are useful for treating diseases such as hyperboliferative disorders (e.g. cancer), immune deficiency disorders (e.g. severe combined immunodeficiency (SCID)), autoimmune disorders (e.g. multiple sclerosis), blood disorders (e.g. thrombocytopaenia), inflammatory disorders (e.g. arthritis), infectious disorders (e.g. hepatitis), allegic conditions (e.g. asthma), neurodegenerative disorders (e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         haemophilia), and tumours. The polynucleotide sequences of the invention are also useful in gene therapy. ABK35610-ABK36232 represent the CDNA sequences of the invention that encode for novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; ds; bisulphite treatment; CpG; DNA methylation; cancer; tumour;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Alzheimer's disease), liver fibrosis, coagulation disorders (e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0;

                                                                                                                                                                                                                                                                                                                                                                                                       The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and neutlar degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AnDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

(ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and outer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune than the adrenal gland, autoimmune therolitics and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. crebral anoxia and parasitic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; nootropic; neuroprotective; cytostatic; dermatological; virucide; immunosuppressive; antiinflammatory; anti-HTV; antibacterial; vulnerary; antiparkinsonian; antisickling; antianaemic; antiarthritic; cancer; antitrheumatic; hepatotropic; cerebroprotective; antiinflammatory; antiallerque; antiallerque; antidiabetic; antiulcer; anticonvulsant; antifungal; antiparasitic; cardiant; immune disorder; cardiovascular disorder; neurological disease; infection; nephrotropic; gene therapy; vaccine; ds.
                                      Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system
                                                                                                                                                  relates to novel genes (ABA11004-ABA21534) and proteins
                                                                                                                                                                                                                                                                                                                                                                                                                            Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

(HUMA-) HUMAN GENOME SCI INC

ŝ Ruben Barash SC, Rosen CA,

WPI; 2001-541565/60

Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system useful for preventing, cancers and metastases

ID NO 9780; 1701pp + Sequence Listing; English. Disclosure; SEQ The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB4678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast

The markers have a single nucleotide polymorphism (SNP) and are useful in determining the genetic predisposition of individuals to CNS disorders, by identifying the nucleotides at a set of genetic markers in a biological sample, where the markers comprise at least one CNS disorder related marker. The present sequence was used
               marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections
ovarian cancer and other cancers of the adrenal gland, bone, bone
                                                                                                                                                               Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to biallelic markers derived from human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isolated polynucleotides, useful for genotyping nucleic acids for biallelic markers for the diagnosis of depression, comprises central nervous system disorder related biallelic marker -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 160755 BP; 43057 A; 36601 C; 38189 G; 42727 T; 181 other;

The invention features to methods for predicting toxic effects by determining the compounds or the progression of these toxic effects by determining the global changes in gene expression in tissues or cells exposed to the compound of these toxic defect, preferably the cells. Also included are methods of predicting at least one toxic effect of a compound or progression of a toxic effect, preferably the effect of a compound or progression of a toxic effect, preferably the expression in a tissue or cell sample exposed to the compound of two or more genes listed in the specification, where differential expression of the genes is indicative of at least one toxic effect or progression of the genes is indicative of at least one toxic effect or progression of the genes is indicative of at least one toxic effect or progression. The method can also be used to identify an agent which modulates the toxic response and predict cellular pathways that a compound modulates to a computer toxic response and predict cellular pathways that a compound modulates in a cell. The methods utilise a set of at least two probes (on a solid support in kit form), where each of the probes comprises a sequence that specifically hybridises to a gene listed in the specification, as the information identifying the expression level in a tissue or cell sample exposed to a hepatotoxin of a set of genes comprising at least two genes listed in the specification. The method is useful for elucidating global changes in gene expression and for identifying toxicity markers in tissues or cell exposed to a known toxin. The genes may be used as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Predicting toxic effects of compounds or the progression of these toxic effects by determining the changes in gene expression in tissues or cells exposed to the toxin and comparing these to gene expression in unexposed tissues or cells.
                                                                                                                                                                                                                                                                      Rat sequence differentially expressed in response to a hepatotoxin #25.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to methods for predicting toxic effects of

CC toxicity markers in drug screening and toxicity assays. The genes and cC gene expression information may be used as diagnostic markers for the prediction or identification of the physiological state of tissue or cell cC sample that has been exposed to a compound or agent. Hepatotoxicity CC sample that has been exposed to a compound or agent. Hepatotoxicity c is characterised by centrilobular necrosis and steatosis. The present CC sequence is an expressed sequence tag (EST) or cDNA derived from a gene CC which is differentially expressed in response to a hepatotoxic agent. XX

microgram of total RNA, treated with T4 DNA polymerase, and purified by ethanol-precipitation. The CDNAs were ligated to Lone-linker LL-Sal3 (Ref. Development 127:1737-1749 (2000) [PMID:1072249]), purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the cDNAs were digested with Sal1 and NotI enzymes, and cloned into Sal1/NotI site of BSPORTI plasmid vector. The DH10B E. Col1 host was trashformed with ligation mixture by the standard chemical method. The average lisert size is about 1.9 kb. The library was constructed by Yulan Piao (NIA)."
                                                                                                                                                                                                                                                                                                                                                      /note-"Organ: brain; Vector: pSPORTI (Invitrogen); Site_1: Sali; Site_2: NotI; Mouse cDNA project by the Laboratory of Genetics, National Institute on Aging (NIA).
